## Digital Counter LIM NC400

Technical description

## Characteristic

- 6-digit red display 12 mm -high
- 2 counting input COUNT1, COUNT2, HOLD, RESET
- extended counting functions
- outputs triggering timing: 0,01 to 9999,99 s
-3 work counters (main, partial, additive)
- max. counting frequency up to 20 kHz
- max. input voltage up to 30 V DC
- input impedance $4700 \Omega$
- auxiliary voltage source: 12 V DC/50 mA

## Input

- NPN/PNP, voltage pulse connections
- counting input
- external voltage pulses max. 30 V DC

## Output I

- SSR 5 V output impedance $100 \Omega$

Output II

- relay: $3 \mathrm{~A} / 250 \mathrm{~V}$

Additional source power
12 V DC/50 mA ( $\pm 10 \%$ )

## Power source

(100 $\div 240)$ V AC/DC ( $\pm 10 \%$ )
$(12 \div 24) \vee$ AC/DC
9 VA
Operating conditions

- temperature: $(0 \div 50)^{\circ} \mathrm{C}$
- humidity: $(0 \div 85) \% \mathrm{RH}$ without condensation

Dimensions [mm]
$48 \times 48 \times 110$; hole: $45,5 \times 45,5$

## Modes of operation

| CODE | Input <br> COUNT2/HOLD | Input <br> COUNT1 | Action |
| :---: | :---: | :---: | :---: |
| $\mathbf{0}$ | HOLD | SUB | DOWN |
| $\mathbf{1}$ | HOLD | ADD | UP |
| $\mathbf{4}$ | SUB | SUB | DOWN |
| $\mathbf{5}$ | SUB | ADD | UP |
| $\mathbf{6}$ | ADD | SUB | DOWN |
| $\mathbf{7}$ | ADD | ADD | UP |
| $\mathbf{8}$ | Select ADD | SUB or ADD | DOWN |
| $\mathbf{9}$ | Select SUB | ADD or SUB | UP |
| $\mathbf{1 2}$ | QUADRATURE |  | DOWN |
| $\mathbf{1 3}$ | QUADRATURE |  | UP |
| $\mathbf{1 4}$ | QUADRATURE $2 x$ |  | DOWN |
| $\mathbf{1 5}$ | QUADRATURE $2 x$ |  | UP |

UP/DOWN - the main counter counts up/down starting from the programmed offset value (usually 0 ) to the SET POINT value.

HOLD - pause, stop counting
ADD - adding counted pulses from given input
SUB - subtracting the counted pulses from a given input
Select ADD/SUB - COUNT 2 input determines if COUNT1 is an input adding or subtracting

QUADRATURE - fast two-way counting mode that uses two counting inputs to determine if counting will be made adding or subtracting

QUADRATURE 2x -
the same as in QUADRATURE mode but it counts $2 x$ faster with increased resolution
